

CALL FOR MANUSCRIPTS

NEW SERIES

FUTURE RURAL AFRICA

In recent years, there has been a socio-ecological transformation in land-use in sub-Saharan Africa, brought about by climate change and the globalization of natural resource management and rural landscapes, such that rural Africa has become a laboratory of global future-making. This new series offers a rich and valuable perspective on the processes and practices that produce and critically reflect upon visions of the future on the continent. Volumes within the series will address socio-ecological, cultural and economic development; climate control, sustainability and migration; land acquisitions and rural governance; rural livelihoods, identities and cultures; conservation, environmental management and community relations. Showcasing cutting-edge research into societal change and the reverberations of global dynamics playing out in sub-Saharan Africa, the series will provide an indispensable resource in this key area of African Studies for scholars, development practitioners, political planners, governmental and non-governmental organisations.

While initial volumes stem from the University of Bonn and Cologne's Collaborative Research Centre 'Future Rural Africa', funded by the German Research Council (DFG), and partners in Kenya, Tanzania, South Africa, Namibia, Botswana, and Zambia and elsewhere in Africa, the series also welcomes external proposals in subjects such as:

- Socio-ecological, cultural and economic development
- The impacts of climate change and climate control
- Development, economics and growth
- Land acquisitions, governance and land law
- Sustainability: food and energy production, transport, waste, water
- Rural livelihoods, identities and cultures
- Agricultural production, intensification and global commodity chains
- Conservation, environmental management and community relations
- Migration and population displacements and resistance
- Connections with the urban: urban expansion and migration, and translocalism

The series will be mainly monographs, but we also welcome occasional edited volumes that enable a continent-wide, multi-disciplinary approach. Please send proposals to the series editors. Please do not send full manuscripts unless you are requested to do so.
